

Thousands of movies and series, delivered inside Telegram. No waiting rooms, no link shorteners, no countdowns — search, tap your quality, and the file is yours. Can't find a movie or series? Request it, and we will message you the moment it lands.

START HERE — these cover almost everything

First, join the Movie/Series Request Group on Telegram (t.me/wedomovies2). That is where you search and where your file arrives, so everything below happens there.

<code>/m avengers endgame</code>	Search for a movie by name.
<code>/s blacklist</code>	Search for a series by name.
<code>/request <title></code>	Ask us to add a movie/series we do not have yet.
<code>/discovery</code>	Browse the library when you do not know what you want.
<code>/commands</code>	The full command list, inside the bot.

01 How to search

Get this right and you will find almost anything on the first try.

Always start with /m or /s Use /m for a movie, or /s for a series, then the name:

`/m avatar`

`/s blacklist`

If you send only the name, with no /m or /s in front, the bot will not reply.

➤ Send the name only

After the command, give the title and nothing else. Do not add words like download, eng sub, kdrama, series, season, anime or drama. Small misspellings are fine — the bot works out what you meant and either shows those results straight away, or offers the closest titles as buttons to tap.

CORRECT

`/m avengers endgame` *(no colon or punctuation needed)*

`/m terminator`

`/m the runner`

➤ Narrow a movie by year or quality

Add the year, the quality, or both — after the name.

EXAMPLES

`/m avatar` *(every version we have)*

`/m avatar 2009` *(that year only — useful when remakes share a name)*

`/m avatar 720p` *(that quality only)*

`/m avatar 1080p` *(higher quality, larger file)*

`/m avatar 2009 720p` *(year and quality together)*

➤ Want one season of a series?

Add S01, S02 and so on. The S stands for Season and the number is the season — and that is a ZERO, not the letter O. Put the name first: starting with the season number tends to pull up other shows.

EXAMPLES

`/s game of thrones s01` *(season 1)*

`/s game of thrones s1` *(short form works too)*

`/s stranger things S01`

`/s stranger things S02` *(a later season, same form)*

➤ Want one specific episode?

Add S01E01. The E stands for Episode — again a ZERO, not the letter O.

EXAMPLES

`/s game of thrones s01e02` *(season 1, episode 2)*

`/s game of thrones s1e2` *(short form works too)*

`/s stranger things S01E01`

`/s S01E01 stranger things` *(episode first)*

► Want a specific quality of a series?

Put the quality on the end — alone, or with a season or episode.

EXAMPLES

`/s stranger things 720p`

`/s stranger things S01 720p` *(whole season, that quality)*

`/s stranger things S01E03 720p` *(one episode, that quality)*

► Anime with no seasons

Many anime run straight from episode 1 to 1000 with no season numbers. Try the name and the episode number on its own — it works when the file was named that way. If nothing comes back, the file is probably filed under a season, so try the S01E form with the same number.

EXAMPLES

`/m naruto 071`

`/s one piece s01e1109`

► Leave out special characters

Type the title as it is written. Apostrophes, colons, hyphens and ampersands are stripped out before the search runs, so leaving them in or out makes no difference. Two things do break a search: squashing a hyphenated name into one word, and spelling an ampersand out as “and”.

If the title has	Type it like this	Not like this
<i>a hyphen</i>	Grown-ish · Grown ish	Grownish
<i>an ampersand</i>	Tom & Jerry · Tom Jerry	Tom and Jerry

Dots are the exception — they are fine. Release files are normally named with dots between the words, the year and the quality, so a search like `avengers.endgame.2019.1080p` still works. It is the other symbols that cause misses.

Still nothing? Try fewer words. Then try the other word order. Then check the spelling of the name only — not the year. If it still does not appear we probably do not have it yet: send `/request` and the title, and you will be messaged when it lands.

02 How to download

Two places to start — inside Telegram, or on the website.

Before you search: join the Movie/Series Request Group on Telegram. Searches and files happen in the group, so you must be a member before you can download there — t.me/wedomovies2. Join once and you are set.

► Downloading from Telegram

The quickest route. You never leave the app.

1. **Search.** Send /m and the movie name, or /s and the series name.
2. **Pick the title.** Tap the one you want from the results.
3. **Pick the quality.** You will see the sizes and qualities we hold — 480p, 720p, 1080p or 4K. A bigger file means better video quality.
4. **The file appears in the Request Group.** No queue, no waiting room, no link to open — it is posted straight into the group you joined.
5. **Forward it to your DM, then download.** Forward the file to your Saved Messages — or any chat of your own — and download it from there. Files are cleared from the group after a while to keep it tidy, so forwarding is what keeps your copy.
6. **Play it with VLC.** Some files use formats a phone's built-in player cannot open. VLC Media Player (videolan.org) is free, plays everything, and is on Android, iPhone, Windows and Mac.

► Downloading from the website

Better when you want to browse with posters, cast and plot before deciding. Open the title on trendimovies.com and you have three ways to watch it:

1. **Stream it on the site.** Where a source exists, press Watch and it plays in your browser — nothing to download at all. Not offered on every title.
2. **Download directly from the website.** Use the direct download link on the page and the file saves straight to your device, the normal way a browser downloads anything.
3. **Send it to Telegram.** Use the Telegram download button and our delivery bot sends you the file. Save it with Telegram's download arrow.

Which should I use? Streaming is fastest if you only want to watch once. The direct download suits a laptop. The Telegram route suits a phone, and keeps the file in an app you already have. The website route is the shortest — the file comes straight to you.

Two free tools that make this much better. For streaming, use Brave browser (brave.com) — it blocks the pop-ups and redirect ads that ruin playback elsewhere. For anything you download, use VLC Media Player (videolan.org) — it opens formats the default phone player often refuses. Both are free and take a minute to install.

03 Release dates & schedule

Knowing when something is due, so you are not searching for a file that does not exist yet.

What a digital release date actually means. A film opens in cinemas, then later reaches streaming. The digital release date is the day the proper HD copy is DUE — the real quality file, rather than the poor camera recordings that circulate before it. It is a calendar of what is coming, exactly like a cinema release schedule. It does not mean the file is here yet.

Command	What it does
/digitalrelease	Films whose digital release has been announced for the next 90 days — the day a proper HD copy is DUE, not the day it arrives. Seven at a time; tap one to Track it.
/schedule	The full release calendar, day by day, covering what is coming across the months ahead.
/upcoming	Films not yet released at all. Tap Track on one and you are messaged on the day it becomes available — no need to keep checking back.
/notify <title>	Watches one specific title for you and messages you the moment it is added.

04 Search commands

The full set. Every search starts with a command — a title typed on its own does nothing.

Command	What it does
/m <title>	Main search across movies and series. The command you will use most. e.g. /m avengers endgame
/s <title>	Series only. Use it when a show shares its name with a film, or to go straight to a season or episode. e.g. /s blacklist
/quality <title>	Every quality we hold for one title side by side with file sizes, so you can choose before downloading. For a series it lists each episode’s qualities. e.g. /quality oppenheimer
/similar <title>	Give it something you liked and it suggests what people who watched it went on to watch — then shows only the ones we actually hold. e.g. /similar inception
/year <year> <title>	Browse a single year three ways: /year 2024 for that year’s top picks, /year 2024 action for one genre, or /year 2024 dune to search a title inside it.
/range <from-to> <title>	Restricts results to a span of years. e.g. /range 2020-2023 action
/size <limit> <title>	Hides anything above a file size you set — useful on limited data. e.g. /size 1gb inception
/request <title>	Asks us to add a movie/series we do not have. It joins a real queue and you are messaged when it lands. e.g. /request the batman
/compare <a> vs 	Puts two titles side by side. e.g. /compare avatar vs inception

/discovery opens one visual menu covering the main tiles — or type any command directly.

These lists clear themselves, and they are yours. Any browsing list — Discovery, Trending, New Files, Upcoming, Top 100, Hidden Gems, Surprise Me, Digital Releases, the Schedule — deletes itself after about two minutes to keep the group tidy, so it has not broken if it vanishes while you are reading. Only the person who ran the command can page through it; if you tap Next on someone else's list the bot will tell you to run your own. Send the command again for a fresh one.

Command	What it does
/discovery	The Discovery Hub — one tap-through menu covering New Files, Trending, Upcoming, Top 100, Digital Releases, the Schedule, Surprise Me, Hidden Gems, Nollywood and Franchises. Start here when you do not know what you want.
/trending	The most-viewed titles on the website right now, counted from real visits rather than a chart copied from elsewhere. Anything we cannot actually deliver is left out.
/newfiles	The most recent additions, newest first. Asks whether you want Movies, Series or Everything, then lists them.
/topmovies	The 100 best-rated films of any single year from 1990 to today. Pick a year and browse it.
/hiddengems	Titles with high ratings but little attention — good when the obvious choices are exhausted.
/surpriseme	One random title from the whole library. Open Details for the plot and rating first, or re-roll as often as you like.
/genres	Browse by genre — Action, Comedy, Drama and the rest — or switch to browsing by mood instead: Happy, Scared, Romantic.
/franchise	Whole film universes laid out in the correct watch order, so you know what to see first.
/nollywood	Nigerian cinema, filtered by Drama, Comedy, Action, Romance or Thriller.
/director <name>	Every film we hold by one director. e.g. /director christopher nolan
/actor <name>	Every film we hold starring one actor. e.g. /actor tom cruise

06 Your profile

/profile opens one menu covering all of this — or type each command directly.

Command	What it does
/profile	Your Profile Hub — everything in this section in one place.
/stats	How many searches and downloads you have made, and the date you joined.
/history	Full details for one film from TMDb — cast, crew and ratings. Needs a title: /history inception
/myhistory	Your own recent searches, so you can return to something without retyping it.

Command	What it does
<code>/diary</code>	A running log of every title you have downloaded — useful for remembering what you already have.
<code>/points</code>	Your points balance and level. Points come from searching, downloading, checking in and inviting friends.
<code>/badges</code>	Badges you have earned and the ones still to unlock, with what each one needs.
<code>/collections</code>	Themed challenges — Action, Classic, DC, Horror, Marvel and Sci-Fi. Work through a set to fill it in and earn its badge; shows how far along you are on each.
<code>/streak</code>	Your current and longest run of consecutive days. Search on any day to keep it alive.
<code>/checkin</code>	Claim today's reward. Checking in on consecutive days pays more each time.
<code>/leaderboard</code>	The top 20 members by points, counted all-time rather than reset weekly.
<code>/invite</code>	Your personal invite link. You earn points for every friend who joins through it.
<code>/share <title></code>	Builds a shareable card for any title — poster, rating and plot — ready to forward to a friend.

07 Fun

A little extra for the regulars. Both reset every day.

Command	What it does
<code>/quotes</code>	The daily quote challenge — a line from a film, and you name it.
<code>/trivia</code>	The daily trivia challenge — one question, multiple choice.

08 Settings & help

Command	What it does
<code>/settings</code>	Your preferences, including whether you receive the weekly digest.
<code>/help</code>	Short help panels for the main features.
<code>/guide</code>	The same manual as this one, but inside Telegram. Not to be confused with Guides on the website, which are hand-picked lists of what to watch.
<code>/commands</code>	This entire command list, on your phone, always current.
<code>/about</code>	Live numbers — how many titles we hold, searches made today, members active.
<code>/start</code>	Starts or re-initialises the bot. Also what opens when someone uses your invite link.

09 In the Channel

You do not have to ask for any of this. Join the Channel and it arrives on its own.

When	What arrives
Every morning	Movie News — what is happening in film today.
Every midday	Actor Birthday — who was born today, and which of their films we hold.
Mon · Wed · Fri	Movie Trivia in the Channel.
Wednesday	New Episodes — every series that gained episodes this week. Plus the Anime Spotlight.
Thursday	Before They Were Famous — early roles of people you know now.
Sunday	Box Office results, Top 10 by Genre, and a Director Spotlight.
Weekly	Your personal digest — switch it on or off in /settings.

10 On the website

trendimovies.com — the same library, with covers, cast and plot.

Where	What you get
Movies & Series	The full catalogue with posters, cast, ratings and plot, and every quality we hold listed with its file size.
Watch	Play a title in your browser where a source exists, instead of downloading it. Not available on every title.
Discovery	Browse visually instead of typing — genres, curated universes, franchises, and themed categories like Anime, K-Drama, Bollywood, Marvel and DC.
Digital Releases	The calendar of dates HD copies are due, so you know when a proper quality file is expected.
Blog & Reviews	Written pieces and full reviews, updated regularly.
Guides	Hand-picked lists for choosing what to watch next, grouped By Mood, By Decade and Hidden Gems — tearjerkers, feel-good films, mind-benders and the best of a decade. About what to watch, not how to use the bot.
Request	The same request queue as the bot, from a web form, if you would rather not use Telegram.
Subtitles	Where subtitles exist for a title, they are offered next to the download.

If we do not have it yet. Send /request and the title in the bot, or use the Request page on the site. It joins a real queue that people work through, and you are messaged the moment it is added — you do not have to keep checking.

Where to find us

Three rooms on Telegram and the website. Each does a different job.

Request Group t.me/wedomovies2	Where you search. Send /m or /s here and the file arrives in the same chat. Free. Join this one before you start — everything in this guide happens here.
Channel t.me/trendimoviex	Movie and series news, daily picks, trailers, and what has just landed in the library. You can react and comment on posts.
Info Hub t.me/trendimovies_infohub	Announcements only — bot updates, maintenance notices, and where the new link is posted if Telegram ever blocks a group. Join this one so you do not lose us.
trendimovies.com	The full catalogue with posters, cast, ratings and plot. Stream in your browser where a source exists, or download.
